

DataCove Features

[ON-DEMAND DEMO](#)

Primary Features

- Archives all incoming, outgoing, and internal emails
- Fast, comprehensive, and advanced search capabilities, with most results in 3 seconds
- Indexes attachments for searchability – including HTML, PowerPoint, Word, and more
- Dedupes attachments to save space (40-60% space gained on average)
- Import existing data from RFC822 format, PST files, and data from Microsoft Exchange and Office 365
- Import data from other email archival solutions – such as Barracuda, ArcMail, MailStore, and more
- Works with the most popular email servers – including Microsoft Exchange, Office 365, Gmail, and more
- Includes flexible user roles
- Add-on feature includes social media archiving

Searching

- Search for email addresses in the To, From, CC, or BCC fields
- Search for words or sentences in the email body, subject line, header, and attachments
- Wildcard search lets you find similar terms when exact terms are unknown (supports single and multiple character wildcards)
- Fuzzy search finds misspelled words via advanced matching logic
- Proximity search finds terms that are physically close to each other in the email body
- Save search queries for regularly performed searches
- Schedule previously saved search queries to run automatically and inform you of results (perfect for email content monitoring)
- Outlook email client integration for search and restoration of archived emails from a familiar interface
- Archive, search for, and retrieve old, deleted or infrequently used Microsoft contacts
- Federated search provides the ability to search through multiple DataCove instances, such as ones holding only archive data from a single system

Usability & Management

- Active directory or LDAP integration for enduser or admin access
- Local account creation and management for end-user or admin access
- Allow or restrict employee access to their own emails
- Easy access to archived emails via the web interface
- View, export, print, or delete emails in bulk
- Restores emails in bulk
- Comprehensive audit trail and system logging
- Legal hold options to bypass retention policy settings
- “Tag” email option for better organization
- Schedule automated searches that will routinely tag new emails with a “legal hold”

Archiving & Storage

- Archives all emails
- Indexes attachments for searchability – including text, Word, Excel, and PDF files
- Customizable retention rules for tiered retention policies
- 256bit AES encryption of all emails
- Attachment de-duplication
- Envelope journaling support
